Choosing the Right Door Made Easy

When it comes to selecting the right door for your project, we're with you every step of the way. We pride ourselves on creating doors that match your design vision, make functional sense for your space and fall within your budget.

1. Choose Door Style
2. Choose Door Details:
Sticking Profile, Panel Option, Glass Option or Mirror
3. Choose Application:
Barn Door, Pocket Door, Swing Door or Pair

What is the Right Door for the Opening?

We understand the different needs of every door opening. We'll help you recognize issues of durability for those high traffic areas, considerations of functionality for the given space, and the style demanded by your design and the aesthetics of the environment.

MDF

MDF (Medium Density Fiberboard) is a smart choice for many of your interior door needs. Not only are MDF doors stable, durable and environmentally friendly, but our super-refined MDF doors provide a remarkably smooth finish and outperform natural wood doors for painted applications.

Because of their homogeneous construction, MDF doors are more durable and resist warping, cracking and splitting. MDF allows us to build more stable and

architecturally correct doors and details.

MDF is an engineered wood product made from recycled and recovered wood fiber. Rest assured, we do not fill our MDF products with cheaper core materials (like many alternatives), and we never use low-density fiberboard.

The MDF we use is superior to the competition. All our MDF is NAF (No Added Formaldehyde), is MR30 rated (30 times more moisture resistant than standard MDF), Carb II and TSCA Title VI compliant and all at no extra charge. We just believe you deserve the best!

** No Added Urea Formaldehyde Medium Density Fiberboard

What is MDF

CHIPS

SHAVINGS

SAWDUST

MDF FIBER WITH RESIN

MDF (Medium Density Fiber) is a 100% recycled product that was Green before Green was cool, making it a great choice for doors. MDF is first produced by taking raw wood residuals (Chips, Shavings and Sawdust), passing through a steam digesting process to soften the wood fibers and then refining them to their individual cell fibers.

We are essentially taking the memory out of wood and putting it back together in a two-dimensional board. These fibers are then dried and a thermal setting resin is introduced to the mix. From here, the matts of fiber are put into a steam heated platen press, applying heat and pressure, give us our net thickness needed.

Discover more on our website, and earn credits, www.archconceptsllc.com/aia-continuing-education/

Superior Structural Wood Edge

MDF holds screws well through the face, but not as well through the edge. We have worked diligently on designing a wood edge that provides a complete glue bond, without any gaps, increasing the structural rigidity of the door. Our wood edge will accept all of your hardware with ease.

V-GROOVE

From panel doors to barn doors, the wide selection we offer at Architectural Concepts is sure to match your design vision and bring high-quality craftsmanship to your residential or commercial needs.

Primer

We use the highest quality WDMA primer in the industry. Our acrylic primer consists of 69% solids, giving you the best surface to topcoat. It dries fast, sands easily, lays flat with no orange peel and with little or no fiber raise. Works with any type of topcoat: Latex, Oil Acrylic and Lacquer.

Machining

With our state of the art CNC Machinery, we can prep any door, for any type of hardware.

Stile & Rail

Our stile and rail doors allow us to craft virtually any style of door while bringing a high level of craftsmanship and quality to our clients. With meticulous construction and the use of premium materials (that exceed industry standards), our stile and rail doors provide sharper corners, better depth and more stability than other comparable doors.

Engineered Stiles

We offer engineered stiles, built with an LSL core, which are excellent for large, oversized doors and pocket doors. It holds screws better than LVL and is available for 1-3/8", 1-3/4" and 2-1/4" doors.

Prefinished Topcoat

We can prefinish your MDF door with our unique, waterborne Acrylic topcoat. As a value-added service, this waterborne sealant is designed for use as a self-sealing topcoat. A strong build providing a durable finish with very good hardness and chemical resistance compared to traditional acrylic latex and Nitrocellulose finishes.

Our topcoat meets or exceeds KCMA test requirements for finishes and is low VOC and UL GREENGUARD Gold Certified for low chemical emissions. We can accommodate most gloss ranges and can be toned to almost any color.

Please ask your customer service representative for more information on pricing and lead times.

Panel Doors

The distinctive look of every panel door we manufacture is in the profile. The door profile is defined by the joints where the sticking and panels come together and the styles of each. Fortunately, we offer over 45 combinations of sticking and panel styles, so you can achieve the perfect profile look for your project. If not, we will be happy to help you through the process to create a custom solution.

Each of our panel doors are built with authentic stile-and-rail construction for architecturally correct results. You can choose from diverse panel door styles in configurations from one to nine panels.

Custom plant on Moldings

Sticking Options

Sticking is the pattern cut into the interior edges of every stile and rail – and is an essential component in your door's overall style. Stiles and rails are the vertical and horizontal wood pieces that create the frame of a panel door.

A small, rectangular handle is visible on the left side. The lighting is soft, creating a subtle gradient across the surface.

F501
Stainless Inlay

A tall, dark grey cabinet with a stainless steel inlay and a handle. The cabinet is shown in a close-up, vertical view. It features a dark grey, textured surface with a horizontal stainless steel inlay running across the middle. A vertical stainless steel handle is visible on the left side. The cabinet is set against a dark background, and a small, bright light source is visible at the top center.

Fire-Rated Doors

You can focus on a proper fire protection system and your design vision when selecting one of our fire-rated doors. Each door, available in fire ratings of 20-, 45-, 60- and 90-minutes, is carefully designed to match any of our non-rated doors, providing you architectural consistency and peace of mind.

	20-minute MDF	45- and 60-minute MDF	90-minute MDF
Category	Category A Category B Neutral Pressure	Category A	Category A
Thickness	1-3/4" minimum	1-3/4" minimum	1-3/4" minimum
Maximum Width Single	4'0"	4'0"	4'0"
Maximum Width Pair	8'0"	7'0"	6'0"
Maximum Height	8'0"	8'0"	8'0"
Fire Glass Max. Area	2,656 sq. inches	1,248 sq. inches (45 min.) 100 sq. in. - Matching sticking (60 min.) 1,296 sq. in. with vision kit	100 sq. in. - matching sticking 1,080 sq. in. with vision kit
Standards	ASTM E-152, NFPA 80, NFPA 252 (2017), UL10B, UL10C, CAN/ULC S104 (2015)		

Transoms

Compliment your doors with MDF transom windows fitted with our clear laminated glass that can make doors and windows feel larger and brighten a room with added light.

AC STC Ratings

Sound Transmission Class (STC) Rating for Doors determines how successful it will be at blocking the movement of sound. Architectural Concepts MDF Doors are initially a good sound reducer, however, the door is just one piece of the equation. It is important to use the proper acoustical gasketing combinations to seal the gaps around the perimeter of the door opening. The gasketing combinations we list below, when tested with our doors, achieved a zero drop-off in our STC rating. *Ultimately, the hardware gasketing and perimeter sealing determine the sound rating that a door achieves.*

Our MDF Doors have been tested with hardware packages from National Guard Products in the following chart. All of these ratings are for operable single swing doors with the sound control hardware specified on the right-hand side of the table.

STC Ratings

Door Styles	STC Rating	Door Thickness	National Guard Products (NGP) Hardware Used:		
			Primary Seal	Threshold Saddle	Door Bottom
A100 - A200 Square Sticking (SS) Flat panel (F)	32	1-3/4"	5050 Twin Row	8144 (optional)	12T6
A100 - A200 Square Sticking (SS) Raised panel (R)	34		-or-	-or-	-or-
A300 - A900 Square Sticking (SS) Flat panel (F)	33		5075	896S-ADJ	225S x STC2
A300 - A900 Square Sticking (SS) Raised panel (R)	35

NGP Door Bottom

Acoustical testing to ASTM E90 Standard Test Method for Measurement of Airborne Sound Transmission Loss of Building Partitions and Elements, ASTM E2235 Standard Test Method for Determination of Decay Rates for use in Sound Insulation Test Methods, and ASTM E1332 Standard Classification for Rating Outdoor - Indoor Sound Attenuation. The sound transmission class (STC) was calculated in accordance with ASTM E413 Classification for Rating Sound Insulation.

Architectural Concepts supplies and machines doors and frames to seamlessly integrate these fully adjustable, innovative hinges for a clean, sophisticated finish.

Pocket Doors and Frames

Available for 2x4 and 2x6 wall frame kits in standard sizes for single and double pocket doors.

The snap-click frame can be assembled in 15 minutes or less and the reinforced horizontal bars have an inverted swallow-tail shaped profile for improved resistance to pressure and predrilled to make attaching drywall even easier.
